

# WHY CHOOSE CLIMATECRAFT AIR HANDLERS?

We make air handling technology. *Better.*

**Custom  
Solutions for  
Reliable,  
Efficient Air  
Management  
Systems**

***Custom Air Handlers with FanMatrix™***

## What Sets ClimateCraft Apart:

### **True Redundancy**

FanMatrix™ arrays provide multiple fans with independent operation, ensuring system reliability even if one fan fails.

### **Expandable**

Modular design allows for scalable capacity to accommodate future growth (4,000-250,000+ CFM).

### **Simple Connection**

Gasketed and bolted design simplifies installation, service, and integration with existing systems.

### **Enhanced Durability**

Robust construction with thermal break and air seals ensures long-term performance in demanding environments.

## Custom Indoor/Outdoor Air Handlers

The ultimate in design flexibility with indoor and outdoor configurations. Combines options to meet specific project requirements. High-efficiency features provide integral performance control while operating at low noise levels.

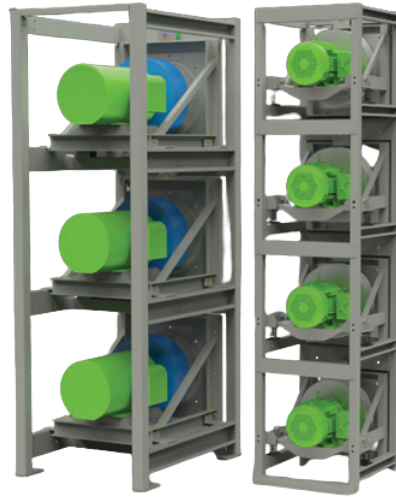

## Skid Options

- Skid configurable with lower construction cost
- Pre-assembled bases reduce rigging time and cost
- Factory-provided options available
- Preassembly reduces footprint, minimizing architectural screening (if required for the building site)

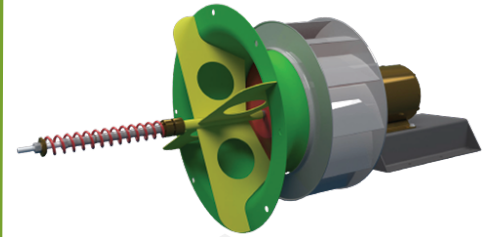

## MatrixMonitor™ System & FlexSpeed™ Motor

Reduce energy consumption and environmental impact by harnessing advanced monitoring with MatrixMonitor™, while FlexSpeed™ Motors provide a quiet, serviceable, and efficient system with high-efficiency, variable-speed operation and low noise levels, simplifying multitasking to a new level.

## Stand-alone FanMatrix™ Fan Array

Designed to provide a quiet, serviceable, and extremely efficient system that will offer years of reliable operation. It includes high-efficiency fans with integral control and an acoustical design with low operating noise levels.

## FanMatrix™ Arrays & BalanceStream® Technology

Designed for major application flexibility and expandability to accommodate current and future needs. This system grows with building requirements, offering a simple design for easy initial and future installation, with BalanceStream® Technology providing efficient operation down to 10% airflow and optimized energy use.

**ACCESS™ Site-Assembled Replacement**  
Eliminates the need for major demolition while saving installation costs and reducing the physical footprint and overall operating costs. Modules include custom flexibility for challenging installations with low operating noise levels.
