

WHY CHOOSE ANDRE VIBRATION CONTROLS?

*Engineered for Stability, Built for
Durability, Trusted for Performance.*

What Sets Andre Apart:

Noise & Vibration Reduction

Products minimize noise and shock, enhancing system efficiency and creating quieter environments.

Proven Engineering Expertise

Over 20 years of vibration control innovation across commercial, industrial, construction, and heavy machinery sectors.

Global Manufacturing Strength

Facilities in Canada ensure quality, scalability, and regional support.

Customizable Solutions

From anti-vibration mounts to seismic isolators, Andre designs for specific load requirements and installation needs.

Andre at a Glance:

Established in 2003 in the Greater Toronto Area, Ontario, Canada, Andre HVAC International (AHI) operates with a dedicated team, combining technical expertise with regional manufacturing to deliver scalable, efficient, and reliable vibration control solutions.

Certified to meet industry standards, Andre serves diverse sectors with a commitment to excellence.

Spring Mounts & Isolators

Customizable configurations allows combining options to meet specific project stability requirements. High-durability designs provide integral performance control while operating reliably.

Rubber Mounts & Pads

Eliminates vibration transmission while saving installation costs & reducing the physical footprint. Modules include custom flexibility for challenging applications with long-lasting performance.

Spring Hangers

Designed to provide a quiet, serviceable & extremely efficient system that offers years of reliable operation. It includes high-strength springs with integral control & low operating noise levels.

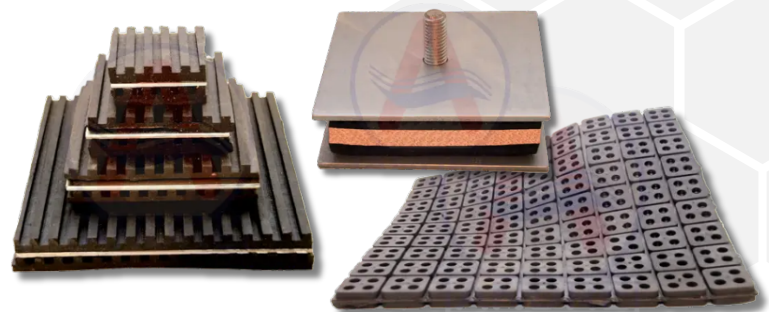

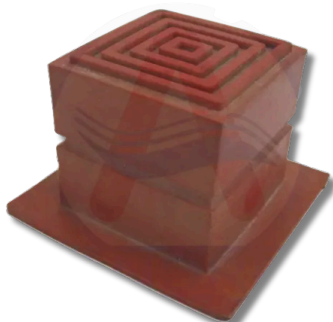

Seismic Products

The high-performance seismic solutions utilize advanced engineering to provide stability during dynamic conditions, compatible with various structural systems.

Floating Floor Systems

Model NHP pad isolators are manufactured from high grade neoprene. This material offers outstanding durability properties (water/ weather resistance), which are an important feature in floating floor applications, due to long service life requirements. Neoprene also offers reliable and tested manufacturing flexibility, allowing isolator designs with natural frequencies of 6-10 Hz.

Anti-Vibration Pads & Bases

Designed for major application flexibility & expandability to accommodate current & future needs. This system grows with project requirements & offers a simple design for easy initial & future installation.
